

The Gender Gap

Men may have a **false sense of security** when it comes to managing **cardiovascular** disease

believe their cardiovascular disease risk factors are **under control**

believe that people **who don't** have high cholesterol **don't need** to **worry** about **heart attacks** or **strokes**.

87% of women with diabetes are more likely to **cite obesity** as a **risk factor** for cardiovascular disease

vs. **73%** of men
